Product Overview

High-Efficiency Washing Machine Motor

This electric motor is specifically engineered for universal washing machine applications, offering reliable performance and robust construction. Designed with a durable metal housing and a precision shaft, it ensures quiet operation and efficient energy consumption. The unit is highly versatile, supporting customizable performance, size, and color specifications to meet diverse manufacturing requirements.

Technical Specifications

Operating Performance

180 W

Maximum Output Power

1700 rpm

Max Rotation Speed

Voltage and Frequency Configurations

Voltage (V)	Frequency (Hz)
110	50
110	60
220	50
220	60
230	50
240	50

Features

Key Features

Single-phase asynchronous, Metal housing, Quiet operation, Energy efficient, Easy installation
