

Washing Machine Immersion Heater Element

This immersion heater element is designed for use in washing machines. It features a dual-rod design and provides efficient heat transfer to the water.

Product Overview

Industrial-Grade Heating Element

This immersion heating element is specifically engineered for high-efficiency water heating within washing machine systems. It utilizes a robust dual-rod, looped design to maximize surface area and ensure rapid, uniform heat transfer. Built with corrosion-resistant metal, this component provides long-term reliability and includes a pre-integrated mounting flange and gasket for a secure, leak-proof installation.

Technical Specifications

Configuration	Dual-rod looped design
Construction	Corrosion-resistant metal, Durable

Installation Features

Sealing Method	Integrated rubber gasket
Mounting	Flange-mounted with electrical terminals

Compatibility

Primary Use

Washing Machine • Water Immersion Heating
