

Washing Machine P Shaft

This P shaft is a component used in washing machines, within the washing and drying machinery category. The shaft is constructed from durable plastic and metal components and includes an O-ring to provide a watertight seal.

Product Overview

High-Performance Washing Machine P-Shaft

The WJ-228-A P-shaft is a precision-engineered component essential for the mechanical operation of washing and drying machinery. Featuring a durable construction of integrated plastic and metal materials, this shaft ensures consistent performance during demanding agitation and spinning cycles. Designed with a watertight sealing O-ring and a specific stepped cylindrical geometry, it meets strict functional requirements for reliability and wear resistance in compatible washing units.

Technical Specifications

Key Features

- Stepped cylindrical geometry
- Integrated watertight O-ring seal
- Central metal core for structural integrity
- High wear resistance

Equipment Compatibility

Washing Machinery • Drying Machinery

Model Number	WJ-228-A
Materials	Plastic, Metal
