

Washing Machine P Shaft

This P shaft is a component designed for washing machines. It facilitates the rotational movement required for washing and drying clothes.

Product Overview

Professional Grade Component

The WJ-220-A P shaft is a precision-engineered component specifically designed for household washing machines. It plays a critical role in facilitating the rotational movement essential for effective washing and drying cycles. Built for durability, this shaft ensures reliable power transmission and high performance under standard operating conditions.

Technical Specifications

Model Number	WJ-220-A
Primary Function	Rotational Movement, Power Transmission
Application	Household Washing Machines
