

Washing Machine P Shaft

The P shaft is a component designed for washing machine transmission systems. It transfers power from the motor to the agitator or drum.

Product Overview

Precision Engineered Transmission Component

The WJ-225-D is a robust P shaft component specifically designed for integration into washing machine transmission systems. It serves as a vital link for transferring power from the motor to the agitator or drum mechanism. Built to endure mechanical stresses and challenging operational environments, this component ensures efficient and reliable performance within the washing machine assembly.

Technical Specifications

Build Quality

- High-durability material composition
- Designed for mechanical stress resistance
- Engineered for specific washing machine configurations

Model Identification	WJ-225-D
Primary Application	Washing Machine, Transmission System, Motor Power Transfer
