

Washing Machine P Shaft WJ-230

The WJ-230 P shaft is a component designed for use in washing machines. It is constructed from durable plastic and metal, featuring a stepped cylindrical body with a central shaft.

Product Overview

Professional Grade Component

The WJ-230 P shaft is a precision-engineered component specifically designed for integration into commercial and residential washing machines. Constructed from a durable composite of high-grade plastic and metal, this assembly ensures long-lasting operation in wet, high-vibration environments. Its stepped cylindrical design and integrated sealing mechanisms facilitate efficient torque transmission while maintaining a watertight integrity within the appliance.

Technical Details

Key Design Elements

- Stepped cylindrical body
- Central shaft protrusion
- Hexagonal torque transmission section

Materials Used	Durable Plastic, Metal
Sealing Method	Integrated O-rings for watertight performance

Application

Compatibility

Washing Machine Repair • Appliance Manufacturing • Mechanical Drive Systems
