

Washing Machine Plastic Component Set

This set comprises injection-molded plastic components for washing machine assembly. The components include the inner tub, front panel, and top panel with a water reservoir.

Product Overview

Precision Engineered Washing Machine Components

This comprehensive set of injection-molded plastic components is designed specifically for the efficient assembly of high-performance washing machines. The collection includes essential structural elements such as the inner tub, front panel, and top panel with an integrated water reservoir. These components prioritize durability, precision fitting, and long-term operational reliability in demanding laundry environments.

Manufacturing Details

Mould Identification Tags	mould_271, mould_272, mould_273
Production Process	Injection Molding
