

Washing Machine Speed Reducer

This component reduces the motor's high-speed rotation to a lower speed suitable for the washing machine's agitator or drum. Constructed from durable plastic materials, it ensures efficient and reliable operation of the washing machine's washing and spinning cycles.

Product Overview

High-Efficiency Speed Reduction

The WJ-0068-AP125 speed reducer is a high-performance component engineered to convert high-speed motor rotation into the precise torque required for washing machine agitator and drum operations. Constructed from heavy-duty, wear-resistant plastics, this component ensures long-term durability and reliable performance across various wash and spin cycles. It is designed for seamless integration and compatibility with a wide range of standard washing machine models.

Technical Specifications

Key Performance Indicators

- High wear resistance
- Reliable cycle consistency
- Extended operational lifespan

Model Number	WJ-0068-AP125
Material	Durable reinforced plastic
Primary Application	Washing Machine Agitator, Washing Machine Drum, Motor Torque Reduction
