

Washing Machine Speed Reducer

This washing machine speed reducer efficiently transfers power from the motor to the washing machine's agitator or drum. It reduces the motor's high-speed rotation to a slower, more powerful speed suitable for washing clothes.

Product Overview

High-Performance Power Transmission

This washing machine speed reducer is precision-engineered to efficiently transfer motor power to the drum or agitator. It effectively converts high-speed motor rotation into the controlled, high-torque motion necessary for optimal laundry performance. Built with durable materials, it is specifically designed to resist degradation from water, chemical detergents, and constant mechanical stress.

Technical Specifications

Performance Key Metrics

30

Gear Ratio Base

Compatibility

- Various washing machine models
- Standard agitator systems
- Drum-driven washing mechanisms

Model Number

WJ-001-BX-10Z-30-29

Operational Characteristics

Quiet Operation, High Torque Output, Moisture Resistant, Detergent Resistant
