

Washing Machine Speed Reducer

This speed reducer is designed for use in washing machines. It efficiently converts the motor's high-speed, low-torque output into a lower-speed, higher-torque output suitable for agitating or rotating the wash drum.

Product Overview

High-Efficiency Speed Reduction

This industrial-grade speed reducer is precision-engineered for washing machine applications, effectively converting high-speed motor input into the high-torque output required for drum agitation. Designed with a robust internal gear system, it provides consistent performance while maintaining quiet operation. The unit is housed in a durable protective casing to minimize mechanical wear and ensure a long service life across various compatible washing machine models.

Operational Speed

Key Design Features

- Robust gear system for high torque output
- Protective housing to prevent wear and tear
- Low-noise operation design
- Durable material construction

Application Compatibility

Washing Machine, Drum Drive, Agitator Systems
