

Washing Machine Speed Reducer

This washing machine speed reducer unit is designed for various washing machine models. The reducer converts the motor's high-speed rotation into a lower speed with higher torque, suitable for the washing machine's agitation or spinning cycles.

Product Overview

High-Efficiency Speed Reduction

The Washing Machine Speed Reducer WJ-001-BD-BLUE is a critical component designed to optimize the mechanical output of washing machines. By converting high-speed motor rotation into controlled, high-torque movement, this unit ensures reliable agitation and spinning cycles. Built with a robust housing and a precision-engineered pulley system, it provides the stability and power transmission necessary for consistent appliance performance.

Technical Details

Model Number	WJ-001-BD-BLUE (10Z)
Function	Motor speed reduction and torque enhancement
Design Features	Blue Housing, White Pulley System, Central Shaft, Lower Support Structure

Compatibility

Application

- Agitation cycle drive
- Spinning cycle drive
