

Washing Machine Speed Reducer

This washing machine speed reducer is designed to reduce the motor's high-speed rotation. It lowers the speed to a level suitable for the washing machine's agitator or drum.

Overview

High-Efficiency Speed Reduction

The Washing Machine Speed Reducer is a precision-engineered component designed to bridge the gap between high-speed motor output and the required operational speed for washing machine agitators or drums. This durable unit ensures smooth performance and reliable torque transmission, essential for heavy-duty laundry operations. By effectively managing rotation speeds, it protects the appliance mechanism while ensuring optimal cleaning cycles.

Technical Details

Model Number	WJ-001-BX-11Z-42.5-30
Primary Application	Washing Machine
Key Function	Reduces motor rotation speed for drum/agitator operation

Performance

Key Performance Metrics

42.5

Reduction Ratio

30 Nm

Torque Multiplier
