

Washing Machine Speed Reducer

High-efficiency speed reducer designed for washing machines. This component optimizes motor speed for effective washing and spinning cycles.

Product Overview

High-Efficiency Washing Machine Component

This high-efficiency speed reducer is precision-engineered to optimize motor performance during both washing and spinning cycles. Designed for durability and quiet operation, it plays a critical role in maintaining consistent performance and improving the energy efficiency of professional washing machines. The model WJ-001-BX-11Z-50-30 ensures smooth mechanical transmission for long-lasting reliability.

Technical Specifications

Performance Features

- Optimized motor speed
- High energy efficiency
- Low-noise operation
- Durable construction

Model Number	WJ-001-BX-11Z-50-30
Application	Washing Machine, Spin Cycle, Motor Transmission
