

Washing Machine Speed Reducer

This speed reducer is designed for use in washing machines. It reduces the motor's high-speed rotation to a slower speed suitable for agitating or spinning laundry.

Product Overview

High-Efficiency Washing Machine Speed Reducer

The WJ-001-BX-10Z-50-40 speed reducer is an essential mechanical component engineered specifically for high-performance washing machines. It effectively bridges the gap between high-speed motor rotation and the torque-intensive requirements needed for efficient laundry agitation and spinning. Constructed from durable, heavy-duty materials, this unit ensures reliable power transmission and long-term operational stability in demanding domestic or industrial laundry environments.

Technical Specifications

Key Performance Attributes

- Durable construction for heavy-duty operation
- Optimized torque conversion
- Reliable power transmission system
- Designed for longevity in high-demand environments

Model Number	WJ-001-BX-10Z-50-40
System Design	Multi-tiered pulley system with central shaft
Primary Application	Washing Machine, Agitation, Spin Cycle, Power Transmission
