

Washing Machine Speed Reducer

This washing machine speed reducer unit is designed for use in washing machines. The component reduces the motor's speed to the appropriate level for the washing machine's various cycles, such as washing and spinning.

Product Overview

High-Efficiency Speed Reducer

The WJ-001-BX-BLUE (10Z) speed reducer is a critical component engineered specifically for high-performance washing machines. This unit effectively regulates motor speed, ensuring optimal rotational control during both wash and spin cycles. Its robust construction provides long-term reliability and maintains precise operational parameters to support the durability of the appliance system.

Technical Details

Operational Capabilities

10 10Z

Gear Ratio Designation

Model Number	WJ-001-BX-BLUE (10Z)
Primary Application	Washing Machine, Motor Speed Control

Design and Build

Color

Blue • White

Design Features

- Robust mechanical construction
- Optimized for variable cycle speeds
- Durable industrial-grade housing
