

Washing Machine Speed Reducer

This speed reducer is a component designed for use in washing machines. It reduces the motor's high-speed rotation to a lower speed suitable for washing and spinning cycles.

JN-001-AX-29-25

Product Overview

Product Overview

The JN-001-AX-29-25 is a high-performance speed reducer component engineered for washing machine drive systems. It is specifically designed to effectively translate high-speed motor rotation into the precise torque and lower speeds required for optimal washing and spinning cycles. Built with robust materials, this reducer ensures reliable power transmission and consistent operational longevity.

Technical Specifications

Model Number	JN-001-AX-29-25
Key Features	Belt-driven system compatible, Robust central shaft, Durable housing
Primary Function	Reduction of motor rotation for wash and spin cycles
