

Washing Machine Spider Arm Drum Support

This washing machine spider arm provides support and stability to the washing machine drum during high-speed spin cycles. Its three-arm design ensures even weight distribution and minimizes vibration for quieter operation.

Product Overview

Robust Drum Support for Reliable Performance

This washing machine spider arm is precision-engineered to provide essential support to the inner tub of clothes dryers and washing machines. Featuring a durable three-arm cast metal design, the component ensures even weight distribution and minimizes vibration during high-speed operation. Its corrosion-resistant construction is built to withstand humid environments, offering a long-lasting solution for drum stability and efficient power transmission.

Technical Specifications

Design Enhancements

- Reinforcing ribs along each arm
- Tapered arm profile
- Central shaft mounting hub
- Strategically placed mounting holes

Material	Aluminum Alloy
Configuration	Three-arm design with central hub
Key Features	Corrosion-resistant, Vibration reduction, High-speed balance, Precision-engineered
