

Washing Machine Spin Shaft, Gearbox, and Transmission Parts

Washing machine spin shaft assemblies facilitate the spinning action during wash and spin cycles. Gearboxes transfer power from the motor to the agitator or drum, ensuring efficient and reliable washing machine operation.

Product Overview

Professional Grade Transmission Components

These washing machine spin shaft assemblies and gearboxes are engineered for high-performance operation in both domestic and imported washing machines. With over a decade of specialized development, these components ensure smooth power transfer and efficient spin cycles. Our range covers thousands of configurations, providing reliable solutions for maintenance and original appliance manufacturing.

Key Technical Models

Available Part Series

JN-8601-BD, JN-8601-BX, JN-8671-S, JN-8225-B, JN-8612, JN-8664, JN-8602-L, JN-8602-N, JN-8603-A, JN-8694-E, JN-8666-A, JN-8606

Specifications Table

Component Configurations

Model ID	Spline/Gear Specs
JN-8601-BD	11Z-32-30
JN-8601-BX	11Z-35-30
JN-8664	11Z-35-30
JN-8602-L	32-25
JN-8602-N	29-21
JN-8603-A	11Z-35-30
JN-8694-E	10Z-35-30
JN-8666-A	11Z-86-40
JN-8606	29-25

Core Features

Key Benefits

- Wide compatibility with domestic and imported machines
- Engineered for high-torque agitator and drum operation
- Stable quality for long-term mechanical reliability
- Thousands of unique types available for diverse requirements
