

# Washing Machine Transmission Gearbox

This washing machine transmission gearbox converts motor power into the oscillating motion needed for washing and spinning. Its robust design includes durable plastic housing and a metal shaft, ensuring reliable and efficient operation.

JN-001-AD-35-30

## Product Overview

### Reliable Transmission Solution

This washing machine transmission gearbox is a critical component engineered to convert motor power into the precise oscillating motion needed for effective washing and spinning cycles. Built with a robust design, it features durable plastic housing paired with a metal shaft to ensure long-term performance under demanding operational conditions. Designed for versatility, this unit is compatible with various washing machine models and prioritizes ease of installation and ongoing maintenance.

## Technical Details

Model Number	JN-001-AD-35-30
--------------	-----------------

## Construction

Housing Material	Durable Plastic
Shaft Material	Metal

## Features

Key Features	Robust Design, Easy Installation, High Durability, Versatile Compatibility
--------------	--
