

# Washing Machine Water Level Pressure Sensor

This water level pressure sensor is designed for use in washing machines. It detects the water level inside the washing machine drum and sends signals to the control unit to regulate the water filling process.

## Product Overview

### Precision Water Level Management

This water level pressure sensor is designed to accurately monitor and regulate water levels within washing machine drums. By converting pressure changes into electrical signals, it ensures the control unit maintains precise water volumes throughout the cycle. This component is essential for preventing overfilling or underfilling, ensuring reliable performance and machine protection.

## Technical Details

### Installation Guidelines

- Use with lower case
- Check for air hose blockages before replacement

Model Number	XQB-8077
Compatibility	Top Loaders Only

## Logistics

### Standard Delivery

**15 Days**  
Maximum Delivery

Country of Origin	China
