

# Washing Machine Water Level Pressure Sensor

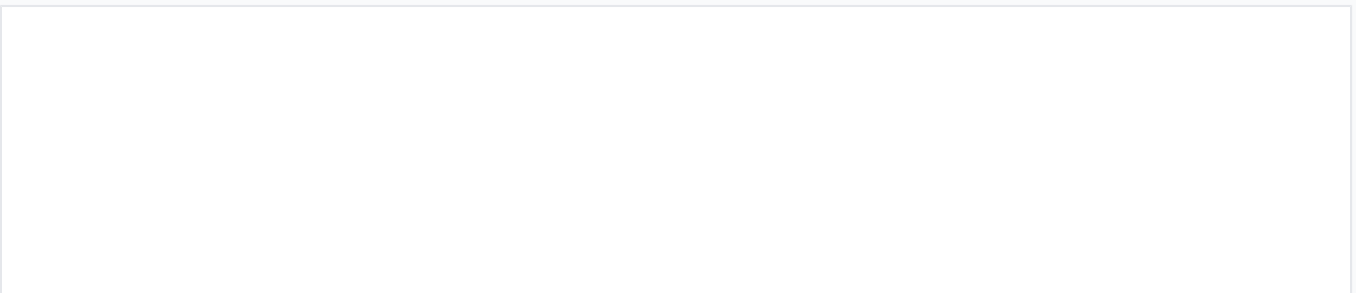

This DC5V pressure sensor is designed to monitor water levels in washing machines. The sensor ensures optimal performance and prevents overflows by accurately measuring the water level.

## ADDITIONAL IMAGES

## Product Overview

The DN-S18 sensor assembly featuring a clear flexible tube and secure connection points.

### High-Precision Water Level Control

This water level pressure sensor assembly is designed for high-performance washing machines and dishwashers, converting water pressure signals into frequency signals for precise program control. Operating at DC 5V, it ensures optimal liquid level management to prevent overflow and maintain washing efficiency. Its robust construction makes it a reliable spare part for maintaining the long-term performance of household appliances.

## Technical Specifications

A variety of compatible pressure sensor models including the DN-S18 series.

Detailed view of the water level pressure sensor designed for precise liquid control.

Model Number	DN-S18
Operating Voltage	5 V DC
Product Series	276 series
Signal Conversion	Pressure signal to frequency signal

## Applications

### Compatible Appliances

- Washing Machines
- Dishwashers
- Air Conditioners
- Refrigerators
- Microwave Ovens

## Quality & Compliance

Certifications	CCC, CE, VDE, RoHS, REACH, CQC, ISO 9001:2000, ISO 14001:2004
----------------	---

## Logistics & Business

### Typical Lead Time

**15 days**

Minimum Days

**20 days**

Maximum Days

### Shipping Options

- Express (Samples/Small orders)
- Air Freight
- Sea Freight

Payment Terms	30% deposit via T/T, 70% balance before delivery
Standard Packaging	100pcs per carton; palletized for large quantities

## Global Reach

### Primary Export Regions

India • Indonesia • Thailand • Mexico • Korea • Egypt • Middle East • Latin America
