

Washing Machine Water Level Pressure Sensor

This water level pressure sensor is designed for use in washing machines. It measures the water level inside the washing machine drum by detecting the pressure exerted by the water column.

Product Overview

High-Precision Water Level Control

This water level pressure sensor is engineered for reliable monitoring of fluid levels within washing machines. By accurately detecting the pressure of the water column, it ensures precise filling and effectively prevents overfilling during operation. Its robust design is built to withstand the demanding environment of daily laundry cycles, making it a critical component for maintaining appliance efficiency.

Technical Specifications

Model Number	KPS-49D2
Component Type	Water Level Pressure Sensor

Service & Supply

Stock Status	In Stock • Ready to Ship
Customization Services	OEM Service
Delivery Lead Time	Short delivery time
