

Washing Machine Water Level Pressure Sensor

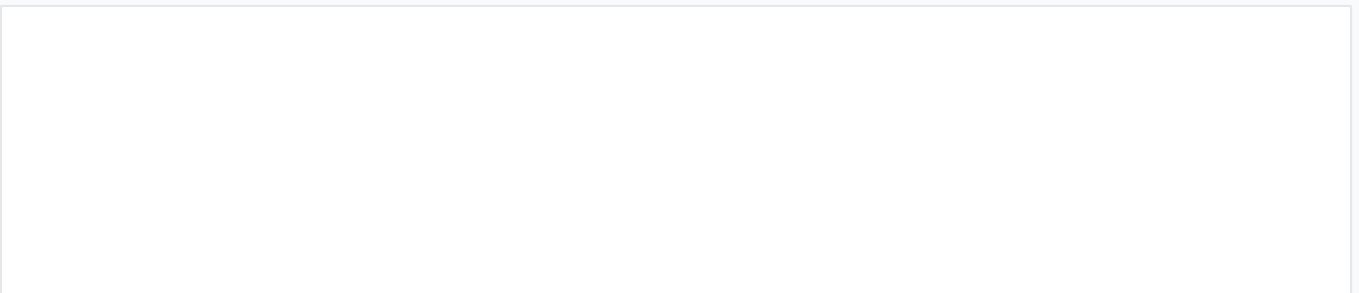

This water level pressure sensor is designed for washing machines. It operates at DC5V and measures the water level inside the machine.

Precision Water Level Management

This water level pressure sensor is a critical component designed to ensure the efficient operation of washing machines and other liquid-based household appliances. By converting water pressure into a precise frequency signal, it allows the appliance's control unit to accurately manage water intake and levels. Its robust design provides reliable performance and helps prevent overflows during cycles.

Technical Specifications

Sensor unit showing electrical connection port and pressure input.

Operating Voltage	5 V DC
Model Number	QB48-06H
Compatible Appliances	Washing Machine, Dishwasher, Household Appliances

Compliance and Quality

Standards & Certifications

CE • CCC • VDE • RoHS • REACH • CQC • ISO9001 • ISO14001
