

Water Circulation Pump

This water pump is designed for efficient water circulation and filtration. The durable construction and powerful motor ensure reliable operation and long-lasting performance.

Product Overview

Professional Water Circulation Pump

This high-performance water circulation pump is engineered for superior efficiency in water filtration and transfer. Built with a robust design and a powerful motor, it ensures long-term operational reliability across demanding environments. The optimized hydraulic system facilitates excellent flow rates while promoting energy savings for professional applications.

Technical Metrics

Performance Indicator

75 m³/h
Flow Rate

Applications

Primary Applications

Swimming Pools, Spas, Irrigation Systems

Design Features

Key Features

- Durable construction
- High-efficiency motor
- Optimized hydraulic system
- Energy-saving operation
