

Water Cooled Diesel Engine

This water-cooled diesel engine is designed for power generation applications. It features a robust construction and efficient cooling system for reliable operation.

Product Overview

High-Performance Industrial Power

The RD145N is a robust water-cooled diesel engine specifically engineered for reliable power generation. Designed for industrial and agricultural environments, it ensures consistent performance and durability under demanding operating conditions. Its efficient cooling system and solid construction provide a dependable power source for critical applications.

Technical Specifications

Model Identifier	RD145N
Cooling System	Water Cooled
Fuel Type	Diesel

Key Features

Engine Benefits

- Robust structural construction
- High-efficiency water cooling
- Engineered for durability and long service life
- Reliable operation under demanding conditions

Target Applications	Power Generation, Industrial, Agricultural
---------------------	--
