

# Water-Cooled Diesel Engine for Power Generation

High-performance water-cooled diesel engine designed for power generation applications. It provides reliable power with efficient cooling, ensuring optimal performance and longevity.

## Overview

### High-Performance Diesel Engine

This water-cooled diesel engine is specifically engineered for reliable power generation in industrial and agricultural settings. Its robust architecture ensures consistent performance under demanding conditions. The advanced water-cooling system is designed to provide efficient temperature management, which extends the operational longevity of the engine significantly.

## Technical Specifications

### Cooling Method

Water-Cooled

### Model ID

ZH1105

## Application

### Primary Applications

Power Generation, Industrial, Agricultural
