

Water Dispenser Ultrafiltration Unit

This water dispenser component is an ultrafiltration unit. It features a cylindrical housing with metallic and black plastic elements for integration into a water dispensing system.

Product Overview

Ultrafiltration Technology

This ultrafiltration unit is designed for seamless integration into water dispensing systems, providing reliable filtration performance. Its compact, cylindrical housing facilitates straightforward installation and maintenance, making it an ideal component for professional water purification setups. The unit is engineered for durability and consistent water quality output.

Technical Specifications

Application

Water Dispenser Integration • Purification Systems

Filtration Method

Ultrafiltration (UF)

Design Features

Compact Design, Cylindrical Housing, Easy Installation
