

Water Heater Pressure and Temperature Relief Valve

This valve provides security protection for water heaters. It is designed to automatically release excess pressure or temperature.

Product Overview

Safety and Efficiency

This pressure and temperature relief valve is engineered for the reliable protection of water heating systems. Constructed from high-quality brass, the unit provides durable performance by automatically regulating excess pressure and temperature. It features standardized pipe threads for simple installation, making it an essential component for both residential and commercial water heater safety.

Technical Specifications

Operating Performance

1.6 Mpa

Working Pressure

110

Max Operating Temp

Connection Size

DN15-DN25

Thread Standard

ISO228

Materials

Material Composition

Component	Material
Body	High quality brass
Stem / Ball	High quality brass
Seal	EPDM

General Information

Working Medium

Water
