

Water Heating System with External Unit and Internal Heat Exchanger

This water heating system includes an external unit and an internal heat exchanger. It is designed for efficient water heating in residential or commercial settings.

Product Overview

High-Efficiency Heating Solution

This advanced water heating system is engineered for optimal thermal performance in both residential and commercial environments. It features a robust external unit paired with an internal heat exchanger, ensuring efficient energy transfer and reliable hot water delivery. The compact, modular design allows for versatile installation options, providing a professional-grade heating solution for diverse infrastructure needs.

System Configuration

System Components

- External Heating Unit
- Internal Heat Exchanger

Design Features

Floor-standing external unit, Metallic fin internal heat exchanger, High-thermal conductivity

Application

Primary Applications

Residential • Commercial
