

Water Meter for Flow Measurement

This water meter accurately measures water flow in various environments. Its durable construction and clear display provide precise readings for effective water management and billing.

Product Overview

High-Precision Water Measurement

The LXSG-15S^50S water meter is a high-quality instrument engineered for the accurate measurement of water flow. Designed with durability in mind, it ensures reliable performance across diverse environmental conditions. Its compact footprint facilitates installation in constrained spaces, making it an ideal solution for both residential and commercial water management and billing applications.

Technical Specifications

Key Features

- High-accuracy flow measurement
- Durable construction
- Easy-to-read display
- Compact design for tight spaces

Model Range	LXSG-15S^50S
Applications	Residential, Commercial, Water Management, Billing
