

Water Pump Body

This is a water pump body designed for use in fluid transfer systems. It is made of cast metal with a flanged base for secure mounting.

Product Overview

Industrial Water Pump Body

This water pump body is a robust, cast metal component engineered for reliability in demanding agricultural and industrial environments. It features a flanged base with precision-drilled mounting holes to ensure stable attachment to machinery or structural foundations. Designed for durability, the unit includes a machined cylindrical sealing surface and multiple threaded ports, providing flexible options for fluid line integration.

Technical Details

Connection Ports

- Machined sealing surface
- Threaded fluid line ports
- Secondary accessory mounting points

Construction Material	Cast Metal, Durable Casting
Mounting Configuration	Flanged base with integrated mounting holes
Finish	Protective light blue-green paint
