

# Water Pump CPM-130

The CPM-130 water pump is designed for efficient water circulation in various applications. It features a robust construction for durability and long-lasting performance.

## ADDITIONAL IMAGES

## Product Overview

### Robust Fluid Transfer Solution

The CPM-130 is a high-efficiency water pump engineered for consistent performance in both residential and light industrial environments. Its robust construction ensures durability in demanding conditions, while the compact footprint allows for seamless integration into existing HVAC, circulation, or pressure-boosting systems. Designed with an emphasis on longevity and energy efficiency, this pump provides a reliable, cost-effective solution for diverse liquid transfer needs.

## Technical Specifications

### Performance Metrics

**130 CPM**  
Model Series

### Primary Applications

Water Circulation, Pressure Boosting, HVAC Systems, Industrial Processes, Domestic Supply

## Design & Construction

### Construction Details

- Robust and durable construction
- Compact design for space-saving
- Energy-efficient motor
- Easy to install and maintain

### Usage Suitability

Residential • Light Industrial
