

Water Pump Gearbox

This gearbox provides reliable power transmission for water pump systems. It features a robust construction suited for demanding industrial environments, ensuring continuous and efficient operation.

Product Overview

Industrial Water Pump Gearbox

This water pump gearbox is engineered based on mature, standardized marine gearbox designs to meet rigorous industrial demands. It features a compact, robust structure that provides a large torque reserve and ensures a long service life. With integrated fluid control, the unit offers mild, stable connection and discharge, while the input-axis clutch design simplifies installation, maintenance, and operation.

Performance & Design

Operational Functions

- Separation
- Reunion
- Moderating
- Fluid-controlled linkage

Key Performance Features

Compact Structure, Large Torque Reserve, Long Service Life, Fluid Control

Maintenance Design

Yes

Technical Specifications

Clutch Position

End of input axis

Customization

Reduction ratios can be adjusted to meet specific market demands
