

Water Source Heat Pump Unit

This water source heat pump unit provides efficient heating and cooling using water as a heat source and sink. Designed for residential and commercial use, it features a robust enclosure and is engineered for quiet operation and long-term reliability.

Product Overview

Efficient Climate Control

This water source heat pump unit provides an environmentally friendly and cost-effective solution for both residential and commercial temperature regulation. By utilizing water as a heat source and sink, the system ensures reliable heating and cooling throughout the year. Engineered for quiet operation and longevity, the unit features a robust enclosure designed to protect internal components and facilitate straightforward installation and maintenance.

Technical Features

Operational Advantages

- Quiet operation
- Easy installation
- Simplified maintenance
- Environmentally friendly heat exchange

Application Scope

Residential, Commercial

Design Specifications

Enclosure Type

Robust Enclosure • Weather-resistant
