

Water Treatment Plant Project

This project is for a water processing plant. It features large, open-air water treatment basins or reservoirs.

Project Overview

Comprehensive Water Treatment Solution

This large-scale water treatment facility encompasses multiple phases of development, including deep processing capabilities. Fully operational since 2009, the plant provides a critical infrastructure solution for regional potable water supply. The facility has been recognized for its high construction standards and operational reliability.

Performance Metrics

Daily Supply Capacity

600000 m3/day

Direct Drinking Water Capacity

Project Details

Development Phases

- Phase I
- Deep Processing Project
- Phase II
- Phase III

Completion Date

October 2009

Awards and Recognition

Industry Awards

National Quality Project (2013)
