## Product Overview

### Watertight Cable Gland for Electrical Cables

The PG M Series Water Joint is a robust and reliable solution designed to provide secure and watertight connections for electrical cables. Engineered for environments exposed to moisture, dust, and other contaminants, this gland ensures electrical integrity by preventing ingress. With a threaded body design, these units offer easy installation and a secure, long-lasting grip for a wide range of cable diameters.

## Technical Specifications

### Available Sizes

- PG7
- PG48

### Ideal Applications

Electrical Panels • Machinery • Outdoor Installations • Power Transmission

### Construction Highlights

- Threaded body for easy installation
- Multiple seals for reliable connection
- Robust material construction

### Protection Features

Watertight, Dust-proof, Moisture Resistance
