

Welded Steel Wire Mesh

Welded steel wire mesh features a grid pattern formed by resistance welding, creating a strong and uniform structure. Available in various sizes and coatings, it is used for fencing, reinforcement, and enclosures.

Product Overview

Industrial Strength Grid Solutions

This high-strength welded wire mesh is constructed from durable steel wires, featuring a uniform grid pattern with precise weld joints at every intersection for enhanced structural integrity. Designed for versatility, the mesh provides excellent dimensional stability and resistance to deformation, making it suitable for demanding indoor and outdoor environments. Whether utilized for concrete reinforcement, security fencing, or industrial enclosures, it offers a reliable, long-lasting solution.

Material and Finish

Available Finishes	Galvanized Steel, Green PVC Coated, Black Coated
Corrosion Resistance	Yes

Technical Specifications

Common Applications

- Security fencing
- Concrete reinforcement
- Animal enclosures
- Industrial partitions
- General-purpose cage construction

Key Performance Indicators

1 High Structural Integrity	1 High Deformation Resistance
---------------------------------------	---

Construction	Resistance welded at each intersection
