

# Welding and Generator Series Machine

This machine combines welding capabilities with power generation in one unit. It is designed for durability and delivers reliable power and welding functionality, suitable for construction, maintenance, and emergency power.

## Overview

### Dual-Function Versatility

This advanced power solution integrates high-performance welding and electrical generation capabilities into a single compact unit. Utilizing sophisticated IGBT and PWM technology, it ensures a perfect welding waveform while maintaining stable power output. Designed for maximum site efficiency, the machine features a lightweight frame and durable casters for seamless maneuverability across construction or maintenance environments.

## Performance Specifications

Welding Technology	IGBT, PWM, Stable Waveform
Simultaneous Operation	Yes
Regulation Method	Automatic Voltage Regulator (AVR) with damper winding

## Design and Utility

### Mobility Features

- Compact design
- Lightweight construction
- Four durable castors

### Recommended Applications

Construction • Maintenance • Emergency Power
