

Well Intervention Workover Rig

This heavy-duty workover machine is mounted on a truck chassis for mobility. It is designed for well intervention and maintenance operations, including replacing downhole pumps and cleaning wellbores.

Product Overview

Professional Well Intervention System

This heavy-duty workover machine is engineered for versatile well intervention and maintenance operations. Mounted on a high-mobility truck chassis, the system is designed to provide stability and reliable performance during essential site tasks. It is an ideal solution for facility operators requiring effective tools for downhole pump replacement, wellbore cleanouts, and stimulation treatments.

Technical Features

Operational Capabilities

- Downhole pump replacement
- Wellbore cleanout services
- Well stimulation treatment
- General well maintenance

Core Components

Lattice-style mast, Derrick system, High-capacity winch, Hydraulic components, Multi-wheel chassis

Operational Details

Transport Type

Truck-mounted mobile unit
