

Wheel Hub Bearing Assembly

This wheel hub bearing assembly facilitates smooth wheel rotation while supporting vehicle weight. The robust bearing is encased in a durable metal housing, ensuring long-lasting performance.

Product Overview

High-Performance Hub Bearing Assembly

This advanced wheel hub bearing unit is engineered for optimal performance and durability in automotive and industrial applications. Designed to handle heavy loads, the assembly integrates angular contact ball bearing and tapered roller bearing technology for superior structural integrity. Its maintenance-free, pre-greased, and sealed design significantly simplifies installation while ensuring reliable, long-term operation under demanding conditions.

Technical Specifications

Maintenance

Maintenance-Free • Pre-greased

Bearing Technology

Angular Contact Ball Bearing, Tapered Roller Bearing

Key Features

Design Advantages

- Optimized assembly performance
- No clearance adjustment required
- Compact and lightweight structure
- High load-bearing capacity
- Integrated ABS/speed sensing teeth
- Enhanced resistance to wear and corrosion

Integrated Sensors

Yes
