

Whirlpool Bathtub Water Circulation Pump

This whirlpool bathtub pump is engineered for efficient water circulation. Its compact design allows for straightforward installation and delivers optimal water pressure for a therapeutic experience.

Product Overview

High-Performance Whirlpool Pump

This whirlpool bathtub water circulation pump is engineered for demanding applications including hydromassage bathtubs, spas, and bubble bath systems. It features a robust design with high-temperature resistant engineering plastic and advanced motor technology to ensure quiet operation and longevity. With built-in thermal protection and electrical safety fuses, this unit provides a reliable and safe solution for professional installation.

Technical Specifications

Max Working Pressure

0.1 MPa
Max Pressure

Insulation Class

F

Certifications

CE, UL

Features & Construction

Safety Features

- Thermal protection against overheating
- Fuse against high electric current

Construction

- High temperature resistant engineering plastic casing
- Double impeller motor for noise reduction
- Small excitation motor

Optional Add-ons

Heater • Ultraviolet germicidal lamps

Applications

Primary Applications

- Hydromassage bathtub
- SPA
- Bubble bath
