

Whirlpool Bathtub Water Circulation Pump

This bathtub whirlpool pump is designed for efficient water circulation in whirlpool bathtubs. Its durable construction ensures optimal water flow and pressure for a relaxing and therapeutic whirlpool experience.

Overview

High-Performance Whirlpool Circulation

This specialized water circulation pump is engineered for hydromassage bathtubs, SPAs, and bubble bath systems. It features a compact, high-pressure design that effectively boosts oxygen and water flow for nozzles. Built with high-temperature resistant engineering plastic and thermal protection, this pump ensures safe, stable, and long-lasting operation in demanding wet environments.

Technical Specifications

Insulation Class	F
Max. Working Pressure	0.1 MPa
Transmission Medium	Dry air

Features & Safety

Key Features

- Small excitation motor for high air pressure
- Double impeller motor to eliminate high-frequency noise
- Thermal protection against overheating
- Fuse protection against high electric current
- High-temperature resistant engineering plastic casing

Optional Add-ons

- Heater
- Ultraviolet germicidal lamps

Certifications	CE, UL
