

Whirlwind Diamond Cup Wheel for Concrete Grinding

This diamond cup wheel is designed for grinding and polishing concrete, stone, and other hard materials. Its whirlwind-type design incorporates strategically placed diamond segments for aggressive material removal and efficient dust extraction.

Product Overview

High-Performance Surface Preparation

The Whirlwind Diamond Cup Wheel is engineered for efficient grinding and polishing of concrete, stone, and various hard building materials. Featuring a specialized whirlwind-type design, it combines aggressive material removal with optimized dust extraction capabilities. Its durable steel body and high-quality diamond segments ensure consistent, long-lasting performance for surface preparation and edge grinding tasks.

Technical Specifications

Design Features

- Whirlwind-type segment configuration
- High-quality diamond abrasives
- Durable steel body construction
- Optimized for dust extraction

Grit Options

Coarse • Medium • Fine

Primary Applications

Concrete Grinding, Stone Polishing, Surface Preparation, Edge Grinding
