

White Aluminum Oxide Grinding Wheels

White aluminum oxide grinding wheels are designed for grinding high-hardness steel. These abrasive wheels are suitable for high-speed steel, high-carbon steel, hardened steel, and alloy steel applications.

Product Overview

High-Performance White Aluminum Oxide Wheels

These high-purity white aluminum oxide abrasive wheels are specifically engineered for precision grinding and finishing applications. They deliver exceptional cutting performance with low heat generation, ensuring minimal workpiece contamination even during demanding industrial processes. Designed for versatility, they are ideal for hardened steels, tool steels, and heat-sensitive materials in both wet and dry environments.

Technical Specifications

Operation Types

- Wet Grinding
- Dry Grinding

Abrasive Material	High-purity White Aluminum Oxide
Suitable Materials	Hardened Steel, Tool Steel, Heat-sensitive Materials

Key Features

Performance Advantages

1 Low

Heat Generation

1 Minimal

Workpiece Contamination
