

White Rice Grading Machine

This white rice grading machine is designed for the precise separation and grading of white rice. It efficiently sorts rice grains based on size and shape to ensure a uniform product.

Product Overview

High-Efficiency White Rice Grading

The White Rice Grading Machine is engineered for the precise separation and grading of rice grains based on size and shape. Utilizing national patented driving technology, this machine features a robust derrick structure and a compact belt-drive design for superior consistency. It is specifically designed to meet the rigorous demands of large-scale rice processing facilities.

Technical Specifications

Structural Characteristics

- Derrick sieve structure
- Compact design
- Optimized screening technology
- Low grain breakage rate

Drive System Technology

National Patent Technology, Belt Drive

Performance Metrics

Key Performance Areas

1 High

Separation Accuracy

1 Robust
