

Whole House Water Purification System

Central water filter system designed for whole-house water purification. It removes sediment, chlorine, and other impurities from the main water supply.

Product Overview

Whole House Water Purification

This central water filtration system is engineered to provide comprehensive purification for residential water supplies. Housed in durable, corrosion-resistant stainless steel, the unit effectively reduces sediment, chlorine, and common impurities. It features an integrated digital display that allows users to easily monitor system performance and adjust settings for optimal water quality.

Technical Specifications

Housing Material	Stainless Steel
Model Number	KLJ-1000
Filtration Capabilities	Sediment Removal, Chlorine Reduction, Impurity Filtration

Features

Application	Whole House • Residential
Interface	Digital Display
