Product Overview

Smart Connectivity Solution

The Smart Wireless WiFi Zigbee Gateway acts as a central hub designed for seamless integration and management of Zigbee-enabled devices within a standard WiFi network. This device facilitates reliable communication, remote control, and automation across both smart home and industrial IoT environments. Its compact, minimalist design ensures it integrates effortlessly into any professional or residential space while providing secure data transmission.

Technical Specifications

Control Features

- Reset button for troubleshooting
- Dual LED status indicators

Supported Protocols

WiFi, Zigbee

Power Input

Micro USB

Application Suitability

Primary Use Cases

Smart Home • Industrial Control • IoT Applications
