

Wind Turbine

Wind turbines convert wind energy into electrical power using rotating blades and a generator. These systems are a key component in renewable energy infrastructure, providing a sustainable source of electricity.

Product Overview

Industrial Wind Energy Solution

This wind turbine system is engineered for utility-scale power generation, featuring a robust tower design and a three-blade rotor configuration. Designed for efficient energy harvesting in open landscapes, the unit supports reliable performance in the electric power industry. Its construction is optimized for heavy-duty installation and long-term maintenance accessibility.

Technical Specifications

| | |
|-------------------|------------------------|
| Number of Blades | 3 |
| Installation Type | Utility-scale, Onshore |

Operational Requirements

| | |
|---------------------------|-----|
| Maintenance Compatibility | Yes |
