

Wind Turbine Blade Pitch Control System

Advanced control system designed for precise wind turbine blade pitch management, ensuring optimal energy capture and system stability. Engineered for high performance in demanding environmental conditions, it provides efficient and dependable operation for wind energy applications.

System Overview

High-Performance Blade Pitch Control

This advanced wind turbine blade pitch control system offers high-precision positioning and dynamic response capabilities to ensure optimal energy capture. Designed for reliability, it features a maintenance-free 5-year battery backup and robust protection against lightning and environmental stress. The modular architecture facilitates easy maintenance, while its versatile interface ensures seamless integration with various master systems.

Key Features

Core Control Capabilities

- Independent pitch control technology
- High-precision blade positioning
- High dynamic response
- System self-diagnostic capabilities

System Performance

Operational Metrics

5 years

Maintenance-free Battery Life

Reliability & Safety

Protection & Resilience

Lightning Protection, Anti-interference, Anti-vibration, Strong Grid Adaptability

Design & Maintenance

Design Specifications

Modular Design • Wide Temperature Range • Friendly Interface
