

# Wind Turbine Generator

This wind turbine generator is designed for converting wind energy into electrical energy. The component is suitable for integration into a larger wind turbine system.

## Product Overview

### High-Efficiency Wind Power Component

This advanced wind turbine generator component is engineered for optimal energy conversion and reliable electrical transmission. Designed to integrate seamlessly into utility-scale wind power systems, it offers robust performance for sustained power generation. Its precision construction ensures compatibility and longevity in demanding environmental conditions.

## Technical Specifications

### Rated Power Output

**1.5 MW**

Power Capacity

Model ID	FD70-1.5
Turbine Class	FD70 Series, Power Generation, Utility Scale
